Thankfully, Photoshop CC does have a few minor improvements on the UI side. The floating panel now has an option to turn off the Quick Swipe tool that is bound to the cursor that was one of the biggest gripes of mobile users who had to swipe the screen to switch views. The other main UI improvements include the Library and Mask panels, which now use a three-column layout rather than the previous two-column layout. This makes it much easier to zoom in on individual images. Additionally, the Image Trace option has been expanded to more accurately detect objects and text. The latest release of Photoshop has solid workflow improvements that have continuously received updates. In this version, you get some more control over the trustworthiness of the AI-edits, more layers per image, the ability to edit and authenticate images, the ability to share compressed, retouching, and neutral images. Another great feature that is a significant step forward are integrated libraries, which allow you to synchronize multiple sets of images. This means you can have a set of images on a hard drive, another set on a network, and a shared set on servers for collaboration. Check out the office now! As always, it's been a pleasure working with Photoshop, and I look forward to even more amazing features in future releases.
