I suppose some of the comments here are more review of the public beta than the finished product, so I'll try to take that into consideration as well :)

Anyway...

First and foremost I love it. It's fast, it's feature-packed (although many features are already in LR4). Smooth UI, great layout, great features; it pretty much blows out the competition. In fact I've been a critic of LR in the past because it's missing important features, and this is a welcome change. The only thing I don't like about it is some of the "smart" features (Zoom to aspect, etc). My understanding is that it has to do with growing image files, and that this will be fixed in 5.2. I do think it has a long road ahead of it, but I'm excited for its future. I hope they keep up the quality of this product, but by its very nature they will not. I do understand quality control at a certain level, but the amount of changes they make, and the infrequent roll-outs have made some users unhappy (another reason I think it's great, so many people will get a chance to try it, and then leave happy about their choice).

On another note: no more Layers/Layers panel in the product menus. Major shift from LR to PS. Their website is very user-friendly, but to use the product you have to log-in. I'm a sucker for things like this, but it just doesn't make sense to me. For people who are very experienced, it shouldn't matter at all, but for someone like me who doesn't have experience...it's a major shift that I just can't see working out for most users. I guess it's great if you want to do complex tasks. For regular users, I can't see it being ideal. As for LR5.2, it's pretty huge, and like they say some time ago, "hey, we built it...it's ours to release...". I really think someone will do something about this, and I wish it wasn't this way.

Think about it, what is all the benefit of using an online learning tool if you can't actually use it on your computer?

You need a reason to pay for the software when you can use the software without having to pay a monthly subscription fee. The ability to get all of Photoshop on your own computer without the subscription fee is very enticing. The standard version for the application is great, but is there any reason to pay for the design software now? With the cost of starting up your own design business through finding graphic design clients and going through the hiring process, you may be better off holding off and using the Photoshop download until you get your business more fleshed out.
