In May last year, Adobe launched a new collaborative editing experience in Photoshop, known as Photoshop for iOS. With the iOS app, people of all skill levels can access, edit, and co-author any files of any size on their iPhone, iPad, or iPod Touch - with anyone else from anywhere. It is even possible to create files that can be shared via email, Messages, or the web, or unlink a version once it's been created. An iPad app update in March gave coauthoring and view plus edit, and last October's Photoshop update gave iOS users the ability to share files to teams, view and comment on edits in real-time, and export works into compatible platforms, such as Photoshop, Sketch, or Illustrator. Selections are like movie icons. And now they're more precise than ever. With the latest Beta release of Photoshop CC, you can watch selections ripple, spin, and thicken with a new tool called "ripple". Other selection improvements make it easier than ever to edit images as if they were design elements. The new *Live Shape* editor promises the fastest way to draw and revise your own solids. A long-awaited standalone JavaScript API means getting even more performance out of proxies, so you can more easily synchronize your proxy data with other applications. DWG import/export now works for separate layers and all shapes in a DWG file, so you can organize your work like a traditional drawing. For designers and illustrators, new *Preview* tools automatically format and adjust transparent and gradient masks. With a single action, you can easily replace objects in a photograph up to 6,500 times their size with the new Delete and Fill tool, called "Trace." And connected copies can be moved and edited in

Photoshop, as well as made for further editing in another application.
